**Visual Perceptual
Assessments –
what's involved?**

Visual Perceptual Assessments

Why does my child need a visual perceptual assessment?

All children develop at different rates. It is expected however that at different ages your child will have learnt and developed a repertoire of certain visual motor and visual perceptual skills.

For example, by the time your child is one, they should have learnt to walk, or by 2½ learnt to speak and communicate. Likewise, by the time your child is 6½-7, they should have learnt right from their left (no reversals) and have developed reasonably good reading eye movement skills (not missing words or letters).

If your child has not developed the appropriate skills by the appropriate age, then their visual performance in the classroom may be affected.

Your child may be asked to do things (eg learn to read) which they are not developmentally ready to do. A visual perceptual assessment will discover whether your child's visual perceptual skills are at the expected level for their age.

A visual perceptual assessment will discover whether your child's visual perceptual skills are at the expected level for their age.

What's involved in a Visual Perceptual Assessment

A visual perception assessment takes approx 1 hour.

We recommend that you arrange a morning appointment when your child is most alert.

During the visual perception assessment we will explore vision-related learning skills. These skills form part of the foundations necessary for learning at school. They include:

- Visual spatial skills
- Visual analysis skills
- Visual motor skills
- Visual auditory integration
- Eye movement skills.

At the conclusion of the assessment the optometrist will provide you with a written report detailing:

- Specific tests performed and their importance to learning
- Your child's strengths and weaknesses
- Any recommendations for further assessment or management.

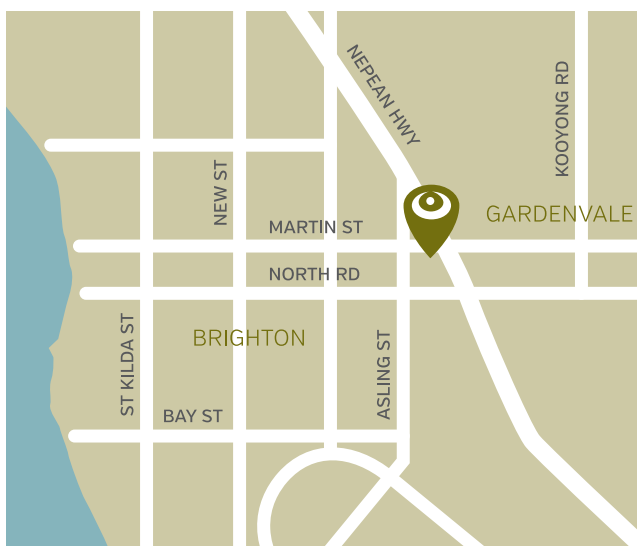

Further management may include optometric vision therapy, occupational therapy, remedial assistance at school or referral to other health care providers.

About Bayside Eyecare

- Focus on children's vision and therapy
- Qualified and respected Behavioural Optometrists
- Accredited and experienced Vision Therapists
- Extensive selection of frames for all ages, including babies and toddlers
- Contact lenses for children and adults
- Comprehensive eye examinations
